

AQURON®

ENVIRONMENTAL PAVESET™

PROVEN SINCE 1984

**Proven on Millions
of Pavers...**

- SEALS & PROTECTS
- ENVIRONMENTALLY FRIENDLY
- JOINT SAND STABILIZER
- WATER & OIL REPELLENT
- EASY TO CLEAN
- FOR NEW & EXISTING PAVERS

AQURON® Proven on millions of pavers ...

Aquron® Environmental Pavement Set was developed on the request of Dallas/Fort Worth International Airport to Aquron Corporation International in the late 1980's to make a "Paver Sealer and Joint Stabilization" two-in-one product that was totally environmentally friendly to protect pavers from jet fuels and also stop sand loss from jet blast. In 1990 Aquron Corporation International developed **Aquron® Environmental Pavement Set** and sealed the Dallas/Fort Worth International Airport taxiways which have performed excellently in this heavy duty application, only requiring maintenance repairs in some areas, nine years later. From this case history, **Aquron® Environmental Pavement Set** has since sealed and protected millions of pavers.

Seals, Protects and Preserves

Aquron® Environmental Pavement Set produces an oil and water repellent surface that is easy to clean and maintain.

Covering the surface with a thin, durable coating **Aquron® Environmental Pavement Set** protects and preserves both pavers and joint sand from petroleum and oil staining etc., while still providing enhanced surface traction.

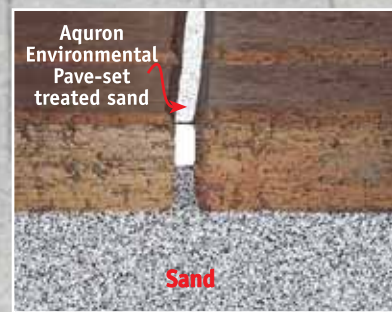

Sealing the sand joints and the pavers as "one" eliminates unwanted weeds and overcomes risks of oil etc. penetrating through sand and into the sides of the pavers causing stains to form beneath surface sealer. **Aquron® Environmental Pavement Set** improves surface resistance to staining, acids, salt spray, freeze/thaw and surface abrasion.

Aquron® Environmental Pavement Set produces a low sheen appearance that highlights the pavers natural colorings designed for all foot and vehicle traffic paving installations.

Joint Sand Stabilization

Aquron® Environmental Pavement Set stabilizes and bonds joint sand to the pavers preventing rain, vehicle and jet blast erosion of paver joints. **Aquron® Environmental Pavement Set** being a very liquid solution penetrates through the sand, setting up stabilization to at least half the depth of the paver, forming a hinge effect that keeps joints tightly locked together and the sand secure, resulting in a homogenous, flexible pavement that can be used for pedestrian traffic and even heavy industrial uses such as airport taxiways, malls, carparks etc.

Simple Application

Application of this environmentally friendly and user safe paver protection and joint stabilization solution is in four easy steps.
